

## Floating Membrane Covers

Designed specifically for the collection and storage of BIOGAS from slurry sedimentation tanks.

- The covers rise and fall with the sludge level maintaining a constant biogas storage capacity.
- The covers are easily transportable, assembled and resistant to corrosion.
- The covers are self-stabilizing and can automatically discharge the gas in case of overfilling.
- The covers can operate under light positive or negative pressure.
- The covers are installed and removed in one piece.
